

next.app — BUILD WHAT'S NEXT HERE

<https://www.nextappcon.com/>

Creative Direction + Storyboard

Duration: 25–30 seconds

Aspect Ratio: 9:16 (vertical-first), adaptable to 16:9

Style: Bold · Fast-paced · Cinematic typography with our Rauschen B font · Glitch transitions · Layered motion

Tone: Futuristic · Confident · Developer-first · Global

OVERALL CREATIVE CONCEPT

“Six worlds. One future.”

The video takes viewers through each ecosystem: Android, Flutter, Swift, React, XR/Games, AI — each with its own colour and energy, before merging into one unified, electrifying visual identity: next.app.

The pacing mirrors how the industry feels: fast, innovative, slightly chaotic, and constantly evolving and next.app is the single place where all of it converges.

Think:

Apple’s event trailers × Google I/O motion graphics × Riot Games esports energy.

I even like the early Apple commercials of the iPods:

https://www.youtube.com/watch?v=mpM5nzSEyXE&list=RDmpM5nzSEyXE&start_radio=1

STRUCTURE (Storyboard Breakdown)

Scene 1 — “The Fragmented World”

 **0:00–0:03**

Quick flashes of different dev ecosystems:

Android code scrolling in our droidcon green colour

Flutter logo morphing into colourful widgets

Swift code lines on a Mac screen

React component trees floating

VR headset POV shot

Neural net visualisation for AI

VO or Text-on-screen:

“Mobile development has never moved faster...”

Visual Direction:

Dark gradient base (brand palette) + glitch effect transitions between ecosystems.

Each sub-brand flashes its colour identity for <0.5 sec (tease, don't label yet).

Scene 2 — “The Divide”

 **0:03–0:07**

Split-screen of each ecosystem building separately: tools, frameworks, logos flickering.

Subtle chaos – energy feels fragmented.

VO / Text:

“...but too often, it's divided.”

Visuals: Split-glitch animation, breaking screen lines, flickers of colour.

Scene 3 — “The Convergence”

 **0:07–0:12**

Massive pulse or energy wave crosses the screen — colour (our VI colours) fragments merge into one beam.

Code, frameworks, and UI elements swirl together in one orbit.

VO / Text:

“This October, the walls come down.”

Visuals:

Light streaks → merge → reveal next.app logo silhouette.

Sub-brand logos orbit the centre for a beat.

Scene 4 — “The Future Builds Here”

 **0:12–0:20**

Rapid-fire clips of what next.app feels like:

Developers laughing, coding, debating. (Free stock conference videos?)

Roundtables.

Live workshops.

Neon lights, dynamic motion graphics, immersive spaces.

Hands-on labs, people wearing XR headsets, laptops glowing.

Close-ups of faces — the human side.

VO / Text:

Six mobile ecosystems. One event. Two days.

Tickets: Limited

Insights: Unlimited

Visuals:

Fast-cut montage synced to bass-heavy beat.

Overlay bold kinetic typography following the rhythm.

Scene 5 — “Reveal”

 **0:20–0:27**

Logo: next.app animates

Tagline:

“The Future of Mobile. Under One Roof.”

Sub-brands appear below as icons or text:

droidcon · fluttercon · swiftcon · reactcon · xr&gamescon · Alcon

Small text fade: “Berlin · Oct 7–9 · 2026”

CTA:

“Explore what’s next — nextappcon.com”

Scene 6 — “Afterglow / Logo Sting”

 **0:27–0:30**

next.app logo glows and disperses into particle fragments → morphing back into code.

Text:

“Built by developers. For what’s next.”

Visual Direction Notes:

Colour Palette: Use the existing next.app gradient — deep blues, purples, magentas — with flashes of each subevent’s colour identity.

Typography: Rauschen B Bold, kinetic movement, glitch & pulse animations. Words should feel coded.

Transitions: Glitch, wipe, and light-streak transitions to match the beat.

Footage Mix: Blend real footage (from past droidcon events, if available) with motion graphics and code-inspired textures.

Lighting Style: Cinematic neon; LED hues; RGB reflections on faces and screens.

Sound Design: Start minimal → rise → pulse → chime payoff. (Think: Apple keynote meets cyberpunk trailer.)

MUSIC DIRECTION:

Examples:

[Paris Madness by Samaran](#)

[Territory by The Blaze](#)

Structure: Build → Pulse → Drop → Resolution

Ideally, we want the song to have a similar sound to the songs listed above – free option

VOICEOVER OPTION:

Bold & Futuristic

“Mobile is changing. Faster than ever.

But what if every platform — Android, Flutter, Swift, React, XR, and AI — came together?

This is next.app.

The future of mobile. Built under one roof. Build what's next.’
